PROFESSIONAL SUMMARY

Final year CS engineer with hands-on experience building RAG pipelines, LLM integrated REST services, and full-stack applications. Currently developing a production AI microservice with Groq and ChromaDB during an active internship. Strong track record in hackathons and independent delivery under constraint.

EDUCATION

Dr. Ambedkar Institute of Technology

Bachelor of Engineering in Computer Science and Engineering CGPA: 9.2

BASE PU College

Pre University Education, PCM-89 percent

Bengaluru, Karnataka

Dec. 2022 – Aug. 2026

Bengaluru, Karnataka

June 2020 – May 2022

TECHNICAL SKILLS

Languages and frameworks: Python, Java, C, JavaScript, SQL, FastAPI, Flask, REST API Design

AI/ML & Data: Hugging Face, OpenCV, LLMs, Fine-tuning, RAG, ChromaDB, Groq

Developer Tools: Git, GitHub, Google Cloud Platform (GCP)

Relevant Coursework: Data Structures & Algorithms, Operating System, Database Management, OOP, Software Engineering, SDLC Concepts, Distributed Systems

Soft Skills: Problem-solving, Communication, Teamwork, Adaptability, Leadership, Innovation

PROJECTS

DRISHTI - Real-time Intelligent Scene Interpretation System | LLMs, Embedded Systems

- Designed and deployed an AI system using ESP32 and fine-tuned smolVLM for real-time scene interpretation, achieving 90% accuracy in unit testing.
- Integrated Bluetooth audio feedback through edge-cloud communication.

Pensieve AI - A Context-Aware Developer Assistant | Python, Ollama, ChromaDB, Streamlit

- Developed a privacy-first RAG application using Ollama and ChromaDB to index and search legacy code context.
- Implemented semantic search and data access controls for secure historical reasoning.

VoxChat - Voice-Enabled Real-Time Messaging Platform | MERN, WebSpeech API

- Built a full-stack chat application using MERN stack with real-time voice messaging, REST API design, and WebSocket communication supporting concurrent user sessions.

EXPERIENCE (INTERNSHIP)

Generative AI Intern – CampusPe

Feb. 2026 – Present

- Independently developing the AI service layer of a security controls assessment platform, building Flask REST endpoints integrating Groq for text analysis, recommendations and report generation, with a RAG pipeline for context-aware responses.
- Implemented production-grade security middleware including prompt injection detection, rate limiting and OWASP threat modelling- verified with automated test suites.

ACTIVITIES AND ACHIEVEMENTS

Astrava - Context Aware Developer Assistant

March 2026

AI Developer, Team Lead

Dr. AIT, Bengaluru

- Built a context-aware assistant during a 24-hour hackathon using RAG, ChromaDB, and Ollama for semantic code search and legacy codebase reasoning. Won **Best Use of AI/ML Technology** award and led team to top 15 finish among all participants.

GenAI Exchange Hackathon - Legal Document Demystifier

September 2025

AI Developer

Bengaluru

- Developed an LLM-powered legal document analysis system using Python and vector search, extracting clause-level risk insights and simplify paper reviews for non expert users.

National Level Hackathon - Kodikon 4.0 at PES University

Oct. 2024

Team Leader

PESU, Bengaluru

- Built a full-stack real-time messaging application with voice features using the MERN stack and WebSpeech API, implementing REST APIs and WebSocket communication. Led team to top 20 of 100+ teams.
